## IN THE CLAIMS

Please amend the claims as follows:

(original) A high-pressure discharge lamp comprising:

 a discharge vessel (10) enclosing a discharge space (11) which
 contains an ionizable filling,

the discharge vessel (10) having a first (2) and a second (3) mutually opposed neck-shaped portion provided with a pair of electrodes (6, 7) arranged in the discharge space (13),

each electrode (6, 7) being tubular over its entire length.

- 2. (original) A high-pressure discharge lamp as claimed in claim 1, characterized in that the electrodes (6, 7) are free from coils in the discharge space (13).
- 3. (currently amended) A high-pressure discharge lamp as claimed in claim 1 or 2, characterized in that the electrodes (6, 7) extend to outside the discharge vessel (10).
- 4. (original) A high-pressure discharge lamp as claimed in claim 3, characterized in that the electrodes (6, 7) are each partially filled with a rod (11) welded to a side of the electrodes (6, 7) facing away from the discharge space (13).

- 5. (original) A high-pressure discharge lamp as claimed in claim 4, characterized in that the rod (11) extends into the discharge space (13).
- 6. (currently amended) A high-pressure discharge lamp as claimed in claim 1-or-2, characterized in that the ratio between the inner diameter  $d_{\rm in}$  and the outer diameter  $d_{\rm out}$  of the electrodes (6, 7) is in the range:

$$0.2 \le \frac{d_{in}}{d_{out}} \le 0.8.$$

- 7. (currently amended) A high-pressure discharge lamp as claimed in claim 1-or-2, characterized in that the inner diameter of the tubular electrodes (6, 7) is at least 20  $\mu m$ .
- 8. (original) A high-pressure discharge lamp as claimed in claim 2, characterized in that the ratio of the outer diameter  $d_{out}$  of the tubular electrodes (6, 7) and the inner diameter  $d_{nsp}$  of the neck-shaped portions (2, 3) is in the range:

$$0.8 \le \frac{d_{out}}{d_{nsp}} \le 0.95 . \quad .$$

- 9. (currently amended) A high-pressure discharge lamp as claimed in claim 1 or 2, characterized in that the electrodes (6, 7) are made of tungsten.
- 10. (currently amended) A high-pressure discharge lamp as claimed in claim 1-or-2, characterized in that the ratio between the electric current  $I_{mhl}$  of the high-pressure discharge lamp and the outer diameter  $d_{out}$  of the electrodes (6, 7) is in the range:

$$2 \le \frac{I_{mhl}}{d_{out}^2 - d_{in}^2} \le 6 ,$$

wherein the electric current is expressed in amperes and the diameter in millimeters.
